CSI ANNOUNCES DATA VAULT SOLUTION

PADUCAH, Ky. – (June 10, 2008) – Computer Services Inc. (CSI) (OTCQX: CSVI) announces LockTite™ Vault, the company's off-site data backup and recovery solution.

David Culbertson, CSI Vice President of Research and Business Development, describes LockTite™ Vault as a key component of CSI's overall initiative to assist banks in protecting their customers' information and meeting increasingly rigorous regulations targeted at improving data security, accessibility and storage. "From GLBA to federal and state regulations, today's banks face ever increasing challenges associated with complex compliance requirements," said Culbertson. "LockTite™ Vault is designed to help banks meet those challenges and examiners' expectations regarding secure data storage and retrieval."

LockTite™ Vault is an automatic data back-up solution that ensures customer data is encrypted at all times. The data is transmitted via CSI's secure telecommunications network and stored both in a secure onsite vault at a CSI location and on a secure data storage network that is protected by multiple levels of security and encryption. This centralized data storage allows banks to quickly and easily access their data in the event of an examination or inquiry.

LockTite™ Vault is a by-product of CSI's robust internal back-up system. "For more than four decades CSI's staff has developed techniques to manage our own company's back-up system," Culbertson added. "This experience has allowed CSI to perfect LockTite™ Vault, which now allows our customers to offer this same level of protection to their most important assets: their customers."

LockTite™ Vault along with Encrypt, Messaging and Perimeter make up CSI's LockTite™ Security Suite, a collection of products designed to address the total security challenge facing today's banks.
